## **Beyond.pl Data Center 2 is re-certified for Rated 4 Standard Maintains 100% availability uptime since the DC2 went in operation in 2016.**

Beyond.pl ([www.beyond.pl](http://www.beyond.pl)), a leading data center operator based in Poznan, Poland, has successfully been recertified as Rated 4 according to ANSI/TIA 942 standards. The Beyond.pl Data Center 2 maintains its position as one of the most secure data centers in Poland and Central and Eastern Europe and is operated to the highest industry standards. “Rated 4 certification is one of the most difficult certifications for a data center and we are pleased to have this recertification completed,” says Aman Khan, CEO of Beyond.pl.

ANSI/TIA certification requires an extensive audit across all four areas – architecture, technology, energy and telecommunications – to ensure the reliability and redundancy of the data center infrastructure. Certification is valid for three years and must then be renewed.

“The Beyond.pl data center was the first data center in Central Europe to meet the Rated 4 certification criteria. In the meantime, we have been consistently recognized by our Polish and international enterprise customers for our ability to provide reliable and secure data center infrastructure services. We have maintained an extremely high level of standards and have a proven record of 100% availability of our DC2 since the start of its operation in 2016. We provide colocation as well as hybrid cloud solutions to a wide range of enterprise and mid-size customers,” says CEO Aman Khan.

### **Beyond.pl**

Beyond.pl was founded in 2005 and is the first carrier-neutral data center in Poland providing IT business services. The Beyond.pl data centers are located in Poznan and have a combined floor space of over 18 000 sqm.

The Beyond.pl data centers offer access to more than 20 telecoms providers, both Polish and international. Data Center 2 is the only data center in Central and Eastern Europe to meet the highest certification requirements for data storage security and has received ANSI/TIA-942 Rated-4

accreditation. In addition, Beyond.pl has been awarded other industry standards, such as PCI DSS, SOC and ISO 27001.

Beyond.pl is a leading data center operator located in Poznan, Poland offering flexible hyper cloud solutions based on proprietary platforms – e24cloud (KVM), VMWare, Hyper V and Microsoft Office 365. The company portfolio includes customized colocation solutions and managed services on a 24x7x365 basis.
